

JORDAN A. ELLIS

Data Scientist

Austin, TX | [jordan.ellis@example.com](mailto:jordan.ellis@example.com) | (512) 555-0148

[linkedin.com/in/jordanaellis](https://linkedin.com/in/jordanaellis) | [github.com/jordanaellis](https://github.com/jordanaellis)

## OBJECTIVE

Data scientist with 3+ years turning messy, real-world data into models and decisions that ship. Seeking a role where I can own problems end to end – from framing the question and building the pipeline to deploying the model and measuring its impact – on a team that cares about rigor and users in equal measure.

## EDUCATION

The University of Texas at Austin

B.S. in Statistics and Data Science, Minor in Computer Science

Graduated May 2021 | GPA 3.8/4.0

- Honors: Dean's List (6 semesters), Phi Beta Kappa
- Relevant coursework: Machine Learning, Bayesian Statistics, Convex Optimization, Databases, Distributed Systems, Experimental Design
- Senior thesis: "Uncertainty-Aware Demand Forecasting for Perishable Retail"

## EXPERIENCE

Data Scientist | Brightline Analytics, Austin, TX

June 2021 - Present

- Own the recommendation and ranking models behind the company's B2B retail product, serving ~2.3M scored requests/day.
- Rebuilt the candidate-ranking pipeline in PyTorch, lifting top-5 click-through by 18% and cutting p95 inference latency from 240ms to 90ms.
- Designed and ran the A/B testing framework the team now uses for every model launch; shipped 11 experiments in 2023, 7 of which reached significance.
- Partnered with a difficult external stakeholder to redefine "relevance" for their category, turning a stalled account into a renewed contract.
- Mentor two junior analysts and run the team's weekly model-review.

Data Science Intern | Meridian Health (Digital Health Group), Remote

May 2020 - August 2020

- Built a readmission-risk model (gradient-boosted trees) on 140k de-identified patient records, reaching 0.82 AUC and flagged as a candidate for a pilot.
- Cleaned and reconciled 6 disparate EHR data sources into a single feature store, documenting the lineage so the work outlived my internship.
- Presented findings to the VP of Clinical Ops; the readmission dashboard I prototyped was adopted by two care-coordination teams.

## PROJECTS

Transit Delay Predictor ([github.com/jordanaellis/transit-delay](https://github.com/jordanaellis/transit-delay))

- Trained a spatiotemporal model on 2 years of public GTFS + weather data to predict bus arrival delays in Austin to within ~3 minutes.
- Deployed as a FastAPI service with a small React dashboard; ~400 monthly users.

Grocery Demand Forecasting (Kaggle – top 4%)

- Ensemble of LightGBM + a temporal-fusion transformer for perishable-goods demand; placed 61/1,600 teams.
- Wrote up the feature-engineering approach; the notebook has 300+ upvotes.

LLM Resume Grounding (side project, 2024)

- Prototyped a retrieval-augmented tool that checks whether each resume bullet is actually supported by a source document, flagging unsupported claims.

## SKILLS

Languages: Python, SQL, R, a little Go  
ML / Modeling: PyTorch, scikit-learn, LightGBM/XGBoost, statsmodels, Hugging Face Transformers, time-series forecasting, A/B testing  
Data / Infra: pandas, Spark, dbt, Airflow, PostgreSQL, Snowflake, feature stores, Docker, AWS (S3, EC2, SageMaker)  
Practice: experimental design, causal inference basics, model monitoring, data visualization (Plotly, matplotlib), clear technical writing
